

Verso™

Ready-to-Fly 110 mm Electric Drone

Available in
four colors

The best in flip-it, fly-it fun!

Any drone can take off, fly and land, but the Verso is one of the few that can do all three inverted. Reversing motors and an Inverted/Flip button on the transmitter make it possible, while advanced flight assistance technology ensures that the Verso moves the way you move the sticks, whether it's upright or inverted. And since it's built tough, it's more than able to handle the routine "oops!" that come with flying indoors! Best of all, it's completely equipped, so you can start enjoying flights almost immediately.

- Invert/Flip button flips the Verso upside down with a push, and brings it upright with a second.
- Radio offers a choice of joystick or gamer-style stick ends to customize control feel to your preference.
- 3+3 stabilization system keeps the Verso stable, level and virtually motionless in a hover.
- Triple rates and three flight modes let you switch from beginner-friendly flight to all-out aerobatics in just minutes.
- Features multi-colored, high-intensity LEDs for easy orientation and tracking.

Stock Numbers:

DIDE10BB – Blue
DIDE10GG – Green
DIDE10RR – Red
DIDE10YY – Yellow

Specifications:

Diagonal Measurement: 110 mm (4.33 in)
