

# NiMH and NiCd Battery Packs

**Q: Know the best way to tell you're getting the best value in batteries?**

**A: Look for Duratrax on the label.**

Modelers have been doing that for over 20 years. And while they may start buying by purely by price, they keep buying Duratrax packs for their value. When you see the Duratrax label on a pack, you know that they're true rated to make sure you get the capacity you paid for. But more than that, Duratrax stands for cells that can stand up to repeated run-and-recharge cycles on the same day — and packs that are built to last and last and last. You may find a lower price — but you won't find a better value anywhere.

**True Rated — never inflated!**
