

REAL-LIFE LOOKS IN A COMPACT PACKAGE

- TAGS (Triple Axis Gyro Stabilization) stabilizes the heli on three axes
- A simple, durable flybarless rotor head offers greater efficiency, easier control and a wide performance range
- All onboard equipment is factory-installed for ease
- Includes a 2.4GHz SLT radio with digital trims and Beginner and Expert modes

MD-530

Ready-to-Fly Flybarless Electric Heli

See it up close, check out details such as the LED lights, panel lines and hidden battery compartment, and it's obvious that no other heli this size offers the scale realism of the multi-purpose MD-530. A fixed pitch, flybarless rotor head makes it more agile than coaxial helis, but easier to control than collective pitch models. A "TAGS" 3-axis gyro keeps the MD-530 flying smooth and steady, whether it's outdoors in a light wind or indoors in a living room or garage.

RTF
READY-TO-FLY

HMXE0813 – RTF

Rotor Diameter: 9.4 in (239 mm)

Weight: 1.6 oz (45 g)

Length: 8.25 in (208 mm)

Includes: LED lights; 4-channel SLT transmitter; factory-installed motor, controller, servos, SLT receiver & TAGS; 3.7V 150mAh LiPo battery; USB-compatible charger & (4) "AA" batteries

Requires: Nothing!
