

ONBOARD CAMERA SHOOTS STILLS AND VIDEOS WITH THE PUSH OF A BUTTON!

1SQTM
V·CAM
Ready-to-Fly
Electric Quadcopter

With some quads, you have to turn on the camera before you take off...and have to land to turn it off. But with the 1SQ V-Cam, there are separate still photo and video buttons on the transmitter, so you can shoot what you want, when you want without editing.

A TAGS-FX Sensor Fusion stabilization system - including a 3-axis gyro and a 3-axis accelerometer - help ensure flying ease and excellent results by correcting for drift as well as unwanted movement in yaw, pitch or roll. New pilots enjoy unprecedented confidence... experts gain the precision to execute perfect maneuvers...and both can perform perfect flips with ease.

- Push buttons on transmitter turn camera on/off, and shoot video or still photos.
- Small enough for indoor use
- So incredibly stable, it's perfect even for first-time pilots.
- Push the Auto-Flip button and move the control stick to make the 1SQ V-Cam do pro-style back-to-front, front-to-back or side-to-side flips!
- Includes color-coded LEDs on all motor pods for easy tracking and orientation.
- Red LED on camera shows you whether the camera is turned on or off.

HMXE0836

Diagonal: 123 mm (4.8 in)

Weight: 46 g (1.6 oz)
