

SPEED B2102

1/8 COMPETITION

BUGGY ENGINE

**Low-profile,
high-performance.**

One look at the Speed B2102 engine and you'll notice: the cylinder head is significantly shorter than those found on similar power plants. It definitely looks cool, but looks are just a small part of it. The Speed B2102's lower profile drops the center of gravity by an impressive 17 millimeters. That boosts your buggy's handling big-time, which can be a real difference-maker on race day. Mount the Speed B2102 in your ride and go low, while the others go home.

- Unveiled at the 2016 IFMAR 1/8 Off-Road World Championships.
- Hug the track and conquer the corners like never before, and without sacrificing cooling performance.
- Ceramic bearings let you run cooler with no special handling or cleaning — they're also lighter, create less friction and last longer than steel bearings.
- Enjoy up to ten minutes of run time per tank with the Speed B2102's more fuel-efficient 22C carburetor.
- O.S. Speed innovations include a tungsten weighted crank shaft with diamond-like coating and silicon potting.
- Also available with a T2090SC muffler.
