

# TTX403

4-CHANNEL SLT MINI RADIO

The TTX403 offers more versatility than you might expect from a transmitter this small. While it's ideal for flying all Flyzone and Great Planes micro aircraft, the TTX403 also has the range to make it a reliable radio for use with larger, faster airplanes as well.

That's in addition to exclusive Secure Link Technology, in which an unbreakable link is created between the transmitter and the companion SLT receiver — a link that virtually eliminates outside interference. You get all this and more in a compact transmitter that's packed with features at an affordable price.
