

TTX610

6-CHANNEL SLT RADIO

Want to add flaps or other functions? The TTX610 makes it easy and affordable. Auxiliary functions can be activated simply by flipping the two-position or three-position switch. Plus, you can activate dual rates on the ailerons/elevator/rudder, with a simple flip of a switch.

The TTX610 offers 2.4GHz dependability and full compatibility with all SLT receivers –including the ones in all Tx-R (Transmitter-Ready) aircraft. That allows you to create an instantaneous and unbreakable link between your receiver and your transmitter in the time it takes to push a button.

Dependability, affordability and features make the TTX610 a standout system that offers the features you want and room to grow!

Includes:

- Switched 5th and 6th channels for landing gear, flaps and other functions
- Dual rate switch (aileron, elevator & rudder)
- Wireless trainer system, plus wired system with a 3.5mm round jack
- Digital trims with memory, fast/slow step adjustment & sound cues (Ch1-4)
