

The ultimate in first-class FPV

Convert to First Person View with Tactic FPV equipment. The FPV-RM1 HD Monitor with Receivers lets you see FPV videos in high definition. Integrated 5.8GHz receivers provide a reliable, interference-free signal. The 7" (178 mm) 1024x600p HD LCD screen gives you a front-row seat to all the FPV action and on-screen icons make it easy to check the signal strength, battery power and more.

Perfect complements for the FPV-RM1, 5.8GHz transmitters are small and lightweight, which makes them ideal for any First Person View setup. Available in multiple power options, each transmitter installs within seconds for instant FPV action. Once mounted in an R/C model, just connect a compatible camera and sync the transmitter to FPV goggles or a monitor (such as the FPV-RM1).

Camera and models sold separately.
