

Their big news...

“The result of years of research and testing, Spektrum’s 3-channel MR3000 Marine 2.4GHz receiver uses a unique signal protocol built into the new DX3S transmitters that has been optimized specifically for marine use.”*

is nothing new to Futaba FASST.

Photo by Jerry Dunlap

While our competitors have been struggling to make their 2.4GHz radios even *work* on water, Futaba FASST has been racking up *wins*.

Now Spektrum® announces its answer — but compared to FASST, still comes up short. There’s one 2.4GHz receiver for marine use, with only three channels. You’ll also need a new DX3S transmitter... or a \$50 upgrade to your old one, plus shipping costs and a 3-5 week wait for service.

OR you can start racing your boat *right now* using any Futaba FASST system “as is” — and expand your channel options from 3 to 14!

Imagine how you might use that extra functionality in your scale marine models...and how confident you’ll feel with FASST Continuous Channel Shifting moving your signal along an enormous number of frequencies, hundreds of times per second. At the extreme speeds of boat racing, you *need* such

impeccable interference resistance.

A Spektrum system gives your signal just two places to go — always trusting that at a critical

moment, one or other will be clear. Sound like a gamble? It is...and if you lose, it’s literally sink or swim.

Once again, Futaba is clearly the superior choice!
