

S.Bus2 Servos

Unleashing every flight system's full potential!

With exceptional performance in a compact size, S.Bus2 servos are just what today's pilot is looking for. SV servos are designed to work well with 2S LiPo packs, while a removable connector makes SVi servos extremely versatile. And don't forget the added power that BLS brushless servos deliver!

FEATURES:

- Introducing new S.Bus2 servo options for a wide range of applications
- BLS servos with brushless motors offer 5x longer life over standard servos, along with incredible holding power
- SVi servos feature a removable connector that allows modelers to use whatever length lead best fits their model
- All SV (High Voltage) servos can handle up to 2S LiPo power, without the need for a regulator
