

EC145 1/43 Scale Collective Pitch R/C Helicopter

EC145

Fly like a V.I.P.

The twin-engine Eurocopter EC145 has served in a variety of roles, including emergency medical service and search-and-rescue efforts, but is perhaps best utilized as a corporate transport aircraft.

Heli-Max has replicated the EC145 in a 1/43 scale electric model with extensive scale detail that has to be seen up close to be believed. The injection-molded body alone includes rivets, windows, turbine exhausts, tie

downs, door outlines and more.

One look at this exceptional machine will have any heli pilot wanting to fly it — and its smooth, stable performance will have them flying with confidence. Both the RTF and Tx-R versions come with a LiPo flight battery and charger, so modelers are just minutes away from piloting this well-appointed machine.

FEATURES:

- Highly detailed scale fuselage
- 4-blade collective pitch rotor head
- Efficient, powerful 14,750kV brushless motor
- TAGS 3-axis gyro

Manufactured by:
Shanghai Nine Eagles Electronic Technology Co., LTD
EC145 and EUROCOPTER are trademarks of Eurocopter. The body design of the helicopter is subject to intellectual property owned by Eurocopter. Reproduction authorized by Eurocopter.

Officially Licensed Product

The forward fuselage is attached magnetically for easy access to the electronics — while also preserving the EC145's scale lines. Mounted inside are a discreet brushless controller, brushless motor, digital servos, battery tray, SLT-compatible receiver and the TAGS 3-axis gyro.

The unique 4-blade rotor head features collective pitch that expands the heli's maneuverability — while the TAGS 3-axis gyro provides smooth, stable flight.

Total heli control — to the 3rd power!

TAGS does far more than any single-axis gyro. It simultaneously controls the yaw, pitch and roll axes of the heli, to provide stability no single-axis gyro can match. With TAGS, pilots can fly with confidence because it detects external forces and compensates to ensure that they won't affect performance. The result: smoother flight and easier handling. It's the only way to fly — and it's standard equipment on all Axe helis!

Choose from two fully assembled EC145 packages.

Enjoy all-in-one convenience — and start flying in minutes

The RTF includes a TX610 transmitter with: **SLT** SECURE LINK TECHNOLOGY

- 10-model memory
- 5-point pitch curve
- Exponential
- Digital trims
- Adjustable gyro sensitivity

The RTF includes:

- Fully assembled EC145 heli
- Triple-Axis Gyro
- Installed 14,750kV brushless motor & ESC, receiver and digital servos
- 3.7V 600mAh LiPo flight battery
- Variable-rate balancing AC LiPo charger

The Transmitter-Ready includes:

- Everything in the RTF except transmitter

Length: 12 in (305 mm)

Rotor Diameter: 9.6 in (245 mm)

Weight: 3.01 oz (85.5 g)

Required items for complete RTF Requires: 8 "AA" batteries

Tx-R Requires: 6-channel SLT helicopter transmitter or 6-channel helicopter transmitter and AnyLink

Available: Late June

Stock Number	Description	Advertised Price
HMXE0852	EC145 Scale Collective Pitch Heli RTF	\$199.99
HMXE0853	EC145 Scale Collective Pitch Heli Tx-R	149.99
