

PRESS RELEASE

Heli-Max releases new CNC-machined upgrades for Axe 100 helis

Heli-Max CNC Head Block w/Assm. Blade Grips Axe 100 CP/SS

Heli-Max CNC Swash Plate
Axe 100 CP/SS/SSL

The newest from Heli-Max are sure to be a success: they're the upgrades that pilots ask for, and they're all for the most popular collective-pitch helis in the Heli-Max line, the Axe 100s. That includes not only the Axe 100 CP, but also the new Axe 100 SS and Axe 100 SSL.

All rotor head upgrades feature the same material and construction, as well as the same three-in-one benefits: billet aluminum for more crash-resistant strength; CNC-machining for tighter tolerances and greater handling precision, and anodizing for more eye-catching appeal.

The head block, blade grips, swash plate and screw set are all available individually. You can also find the head block, blade grips and screw set available together in a convenient, money-saving package (HMXE2054).

Available: Now
