

MS Connect ESC Programming Adapter

Better ESC programming through technology

With the MS Connect modelers can utilize the power of their PCs to tap into ESC tuning options impossible through manual programming — with push-button ease and in less than a minute. The adapter plugs into the USB port, providing complete control over the ESC’s Settings, Throttle, Timing and Brake functions. The MS Connect also offers the capability to update programming features in the future.

FEATURES:

- Plugs into the USB port
- Four basic programming screens: Settings, Throttle, Timing and Brakes
- Fine-tune boost and turbo timing
- Adjust throttle curve or voltage cutoff
- Set current limits
- Establish coasting brake parameters
- No counting LED lights and referencing a chart — simply select the option and click “update”
- Accepts firmware updates for keeping a competitive advantage in the future

Available: Late January
