Verso

The drone you can fly upside down

Specifications:
Diagonal dimension: 110 mm (4.33 in)
Weight: 34 g (1.2 oz)
Requires: nothing!

Flip-it, Fly-it Fun!

Add a whole new dimension to drone flight with the Verso! This nimble little drone is able to takeoff, fly, and land inverted thanks to its reversing motors—offering more fun options for every flight. It can also switch quickly between inverted and regular flight with one push of the Invert/Flip button. Once inverted, flight assistance technology eliminates the confusing control reversal inverted flight usually entails.

With the Verso, pilots can quickly switch between docile, beginner-friendly flight characteristics and faster, no-holds-barred flight with three selectable flight modes. It's tough, too, more than able to handle the routine dings that indoor flights dish out. LED lights assist with orientation and improve flight in low light conditions. Plus, since it's a Dromida product, absolutely everything is included for flight, down to the AA batteries—just charge the flight battery and fly!

Includes:

- Ready to fly Verso drone
- Q205 transmitter for precise control
- USB charger for quick power ups virtually anywhere
- 1S 350mAh LiPo battery that delivers 5+ minute flights
- 4 "AA" batteries for transmitter
- Extra set of replacement blades
- Joystick and gamer-style stick ends

Available in 4 colors

Available: January
