

GYA460 6-Axis S.Bus Air Gyro

"[The GYA460's] performance is superior to that of similar gyros out of the box, with a simpler set-up."

- Nick Maxwell, World Champion pilot

"I've been flying my Laser with the Futaba GYA460 gyro - and it's great! If the airplane is inverted, and you flip the gyro into Beginner mode, the plane will execute a perfect 90° turn while rolling itself from inverted to upright. It's a built-in bail-out switch!"

- Chris Mulcahy, Team Futaba pilot

An awesome tool for in-flight instruction!

Whether you're a mild or wild pilot, you'll find lots of reasons to like the GYA460. Beginner mode - one of three selectable flight modes - gives new pilots the stability and confidence needed to master most maneuvers. The GYA460's easy set-up and S.Bus compatibility are just icing on the cake!

Dimensions: 1.37 x 1.06 x 0.47 in (35 x 27 x 12 mm)

Weight: 0.35 oz (10 g)

Features

- 3-axis gyro sensors and 3-axis acceleration sensors, for the ultimate in flight control.
- Three selectable flight modes, including Beginner mode that provides automatic horizontal level return control and flight attitude angle control.
- Gyro mode assists pilots learning inverted flight and aerobatics, while Gyro Off mode puts flyers in complete control.
- Separate sensitivity adjustments for aileron, elevator and rudder.
- Easy to set up, and S.Bus compatible.
- A low profile design, compact in size and light in weight.
