

Brushless 700-800 Heli Motor 5825-520 3D

“The O.S. 5825-520 is powerful and efficient — a perfect match for demanding 3D maneuvers and flight styles.”

— Nick Maxwell

The motor of champions.

There’s no better choice than the 5825-520 Brushless 700-800 Heli Motor for extreme 3D flight. It’s the perfect match for pilots looking for pure power and precision to pull off advanced aerobatics. In addition to superior performance, this hand-wound, high-inductance motor features a samarium-cobalt magnet for the perfect balance of consumption and power output, along with a heat-reducing stator design. For best results, add 12S LiPo power!

Features

- Developed specifically for executing extreme heli aerobatics, including 3D.
- Hand wound for higher inductance.
- The samarium-cobalt magnet endures high temps better than neodymium.
- A new stator design minimizes heat generation, to help maintain a good balance of power output and consumption.

Outside Diameter: 2.28 in (58 mm)

Body Length: 2.13 in (54 mm)

Shaft Length: 1.58 in (40 mm)

Rated Voltage: 44.4

Rated Current (Amps): 100

Maximum Current (Amps): 150 (5 seconds)

kV Rating: 520

Available: August

| Stock Number | Description | Advertised Price |
|--------------|--|------------------|
| OSMG9475 | Brushless 700-800 Heli Motor 5825-520 3D . . | \$349.99 |
