

PRESS RELEASE

The ultimate in first-class 5.8GHz FPV equipment

Commonly known as “FPV,” First Person View lets pilots, drivers, extreme sports enthusiasts and photographers shoot videos and photos from an up-close perspective. There are plenty of equipment options to choose from, but none make it easier than the new line of Tactic 5.8GHz FPV equipment!

The FPV-RM1 HD Monitor with Receivers lets you see FPV videos in high definition. Integrated 5.8GHz receivers provide a reliable, interference-free signal. The 7” (178 mm) 1024x600p HD LCD screen gives you a front-row seat to all the FPV action; on-screen icons make it easy to check the signal strength, battery power and more.

Perfect complements for the FPV-RM1, 5.8GHz transmitters are small and lightweight, which makes them ideal for most First Person View setups. Available in multiple power options, each transmitter installs within seconds for instant FPV action. Once mounted in an R/C model, just connect a compatible camera and sync the transmitter to FPV goggles or a monitor (such as the FPV-RM1).

Camera sold separately.

Available: November

Stock Number	Description	Advertised Price
TACZ5000	FPV-T1 25mW 5.8GHz Transmitter	\$44.99
TACZ5005	FPV-T2 200mW 5.8GHz Transmitter	\$49.99
TACZ5010	FPV-T6 600mW 5.8GHz Transmitter	\$59.99
