Duratrax Li-24 AC 2S-4S Balancing Charger

Now available with an XT90 connector!

The XT90 is the coming star of high-amp applications, and Duratrax is moving to meet it with its new XT90-equipped Li-24.

Like the other two Li-24 chargers, this version balance charges 2S-4S LiPo or LiFe packs to full capacity and each cell to the 4.2V maximum. Compact dimensions and its ability to use 120-240V power sources makes it a great choice for the workbench. And used with a power supply, it's easy to take along to the track or flying field. Setup is simple, with selector switches for choosing battery chemistry and charge rate. Charging starts automatically at hookup and ends when the pack reaches constant current and voltage. Charge status is available at a glance. One multi-color LED shows changes in pack status; LEDs for each cell glow when the cell is balanced. And with the XT90 connector, it's great for the packs used in today's high-performance 1/8 scale vehicles.

Add in its very economical price, and the Li-24 emerges as the perfect way to keep LiPo and LiFe packs primed for top performance. See more at Duratrax.com.

DTXP4622 Li-24 AC 2S-4S Balancing Charger w/XT90 Plug \$24.99

Specifications

Voltage Input: 110-240V AC
Battery Types: LiPo/LiFe
Number of Cells: 2-4
Charging Method: cc/cv
Charge Current: 1A, 2A and 3A*, selectable
Balancing Current: 200mA
Starts Charge: Automatically at hook-up
Ends Charge: When pack reaches cc/cv
Controls: LiPo/LiFe and charge current switches
Indicators: Multi-color pack LED; red cell balancing LEDs
Output Jacks: 4 mm banana plug
Output Connector: XT90
Includes: detachable AC power cord and 18AWG charge cord with banana plugs
Safety/Protective Features: reverse voltage protection
