

New updates to RealFlight Drone and RealFlight Mobile

Champaign, IL — Great news for RealFlight fans: several improvements have been made that will further enhance the virtual flight experience that has made RealFlight R/C's best-selling flight simulator. RF Drone now features a fully operational 3-axis gimbal for the Xiro Xplorer G, and the headless mode can now be customized just like the three main flight modes. Both versions of the Xplorer now have GPS, and accessing them is smoother and quicker than ever.

RF Mobile has also been upgraded to improve the flight characteristics of several models, including the new Xplorer V and the Tempest 280. For more information visit realflight.com.
