

H107D+ FPV X4 Plus Ready-To-Fly Camera Drone

The complete package in an affordable UAV

For UAV pilots wanting the best for less, Hubsan introduces the H107D+ FPV X4 Plus Camera Drone. The technology is top-of-the-line, starting with a 720P HD camera on 5.8GHz frequency that lets you see what the camera sees in real-time, First Person View (FPV) on the hobby-quality transmitter. As for flight characteristics, the H107D+ is super stable, so even pilots with limited experience can control this drone with ease.

NOTE: Flown as equipped, the H107D+ does not need to be registered with the FAA.

The transmitter's 4.3" LCD screen clearly displays the camera's First Person View (FPV) images.

FEATURES:

- The 6-axis flight control system features adjustable gyro sensitivity
 - Altitude Hold makes learning to fly much easier
 - Multiple flight modes allow pilots to fly at their particular comfort level
 - True Direction function moves the drone in the same direction as the sticks
 - Perform flips and rolls with just the push of a button
 - 5.8GHz video transmission delivers enhanced picture reliability and range
 - A built-in memory card slot lets you store videos for sharing*
 - The battery "snaps" into place for quick installation
 - Bright LED lights aid in orientation and allow for night flying
 - Capable of flying both indoors and outdoors
 - A 3.7V 530mAh LiPo battery and USB charge cord are included
 - Measures 113 mm (4.45") across diagonally
- *Memory card sold separately.
