

Duratrax 32-Tip Multi-Driver

Drive 32 different fasteners with one pocket-sized tool

Any modeler's pit or field box is better equipped with the 32-Tip Multi-Driver. It works with the most common hardware fasteners found in popular R/C drones, park flyers and RTR vehicles. The tool also has many household uses — such as watch, jewelry and eyeglass repair.

The anodized aluminum handle conveniently holds 15 short-shank, double-tip bits, with a bit stored in the "in use" position. Sizes are clearly marked on all bits, which provide a wide selection of tips for slotted, hex, Phillips, Pozidrive and Torx (or "star") heads.

Simply rotate the end cap of the handle to remove the bit you need. Bit shanks lock onto the adjustable-length shaft with a push for easy attachment and removal. Don't worry if your work surface isn't level — the handle's shape keeps it from rolling away when not in use.
