

“High-quality, affordably priced flying model airplanes.”

THE EASIEST WAYS EVER TO FLY R/C!

MICRO ULTRIX™ Biplane

The transmitter's left stick controls flight speed. The right stick uses the power of the twin motors to turn your model left or right.

HCAA1993
Wingspan: 13 in (325mm)
Length: 14 in (355mm)
Requires: (6) "C" batteries and (1) 9V battery

ASSEMBLY

- Perfect for small sites, like parks and playgrounds.
- Twin motors supply efficient power for flight and easy steering.
- High-capacity NiMH battery charges quickly — and offers long flight times between charges.

MICRO ULTRIX™

HCAA1994
Wingspan: 15.75 in (400mm)
Length: 13 in (325mm)
Requires: (6) "C" batteries and (1) 9V battery

Micro Ultrix and Micro Ultrix Biplane electrics make R/C flying incredibly easy. Each is completely assembled and, except for a few alkaline batteries, includes everything you'll need.

BOTH MODELS INCLUDE:

- 2-channel radio system*
- Two micro motors*
- Rechargeable NiMH battery*
- Portable field charger
- Two spare propellers

* = Factory installed!

The handy charger goes where you do — and it's simple to use. A red light flashes while your plane charges, then glows green when it's done.

AquaCraft™ Reef Racer™ 2 RTR

Built for fun — and ready to run!

HCAB14**
Length: 15 in (380mm)
Beam: 6 in (152mm)
Includes: 2-channel AquaCraft radio w/1 servo, 380 motor, ESC, 6-cell 1000mAh NiMH pack, 12V DC charger, boat stand
Requires: 8 "AA" batteries

Dive into offshore action immediately! Reef Racer 2 comes with decals in place and the radio gear, motor and ESC installed. Twin, twist-off hatches on the enclosed hull and a hook & loop-attached hatch protect against taking water, but release easily for pack changes and maintenance. You'll enjoy the quick response of the direct drive and the Reef Racer 2's "turn on a dime" maneuverability — even at top speed. If you happen to flip or roll, the self-righting hull gets you back into action in seconds. And if you're a southpaw, you can adapt the included AquaCraft pistol radio easily for left-hand use. Available in six sizzling colors.

Hobbico® Combat Armor™

1/35 Scale R/C Tank Set

HCAC0003
Length: 8 in (205mm)
Includes: (2) motorized King Tiger tanks
and (2) radio control transmitters.
Requires: (2) 9V and 12 "AAA" batteries

The details would do a display model proud, but the action is as real as it gets! At just 8" long, the King Tiger Tanks can turn any area of the house into a field of battle. Push the "START" button, and the tank comes to life with a lurch and the sound of grinding gears. Move the sticks and it slams into action. Dual motors provide power for maneuvers and charging up inclines up to 30°. But these tanks don't just move; they do battle. The weapon is an infrared light beam, just under the main gun. The target: a "hit" sensor on the other tank. Push the firing button and the main gun roars and rocks the tank. Hit the other tank once and it stops cold, broadcasting damage sounds. Hit it three times in a row, and it's disabled for five seconds. Great for tank commanders of all ages.

Hobbico® Sea Scout™ RTR

Ready-to-Run EP Micro Submarine

GO DEEP with submersible R/C!

HCAB0020
(Black, 27MHz) and
HCAB0021
(Grey, 48MHz)
Length: 4.92 in (125mm)
Width: 1.34 in (34mm)
Height: 1.97 in (50mm)
Requires: (1) 9V and (6) "C" alkaline batteries

It's so small that it can be held in the hand, but stores enough energy for missions that last over 15 minutes. Perfect for pools, tubs and aquariums, the Sea Scout arrives fully assembled and complete with a battery, charger and a 3-channel radio. Buttons on the transmitter's top control dives and surfacing. The left stick on the radio's face gives you throttle control in forward and reverse; the right stick, steering control. Working lights show the way as the Sea Scout explores the water's depths. And when power runs low, you can recharge in minutes. Available in black (27MHz) and grey (49MHz) versions so two Sea Scouts can patrol at the same time. For children 8+ years old.

FlyZone™ Sky Zap 2™ EP RTF

Great for pilots 14 years old and up!

HCAA1980
Wingspan: 42.5 in (1080mm)
Length: 30 in (760mm)
Requires: 8 "AA" batteries

Stability. It's a key to flying success — and the Sky Zap 2 has it. Advanced electronics keep it stable and level at all times, increasing your confidence (as do the tips on the free "how-to" DVD). The included auto cut-off reserves power for safe, controlled landings. Even rough landings would be no problem: Spars in the 1-piece wing add strength, while a band-on design lets the wing separate from the durable, blow-molded fuselage in a crash. Assembly takes only minutes because most on-board gear is already installed. All that's required are 8 "AA" batteries. Everything else — a 6-cell, 600mAh NiMH pack, 12V DC charger, and a hobby-quality 2-stick radio — is already installed.
