

"High-quality, affordably priced flying model airplanes."

Mini Ventura™

Ready-to-Fly Electric R/C Plane

Good things DO come in small packages!

Includes:

- 3-Channel FM Radio System
- 180 Motor
- Electronic Speed Control w/Auto Cutoff
- 6.0V 600mAh NiMH Battery
- 12V DC Field Charger
- Two Folding Propellers
- FREE "Get Flying" DVD

Complete — and ready to fly in minutes!

The Mini Ventura RTF is the EASY way up for pilots: it not only includes everything for first flights (except 8 "AA" cells), but offers everything in field-ready condition. AND, the Mini Ventura is great for any skill level — it flies as stable as a park flyer, with a 180-size motor that powers it slowly through maneuvers, and its 31.5" wingspan makes it a breeze to transport.

- Included 3-channel radio system offers FM signal clarity and improved interference resistance.
- Single-stick control of rudder and elevator develops flying skills that simplify the transition to more advanced radios.
- A throttle lever and an ESC with auto cutoff provide pilots with easy, proportional control of flight power.
- The prop folds back during landings to prevent prop damage.
- Included NiMH battery delivers up to 8 minutes of powered flight.
- A red safety button mounted on the fuselage prevents accidental motor starts.
- FREE DVD offers an easy way to learn and handy tips for successful flying.

Besides FM signal clarity, the included 3-channel radio offers single-stick control of the rudder and elevator to develop flying skills, along with a throttle lever for easy, proportional control of flight speed.

The factory-installed radio gear offers the compact size, lightness and dependability of today's best micro electronics.

Flip back the canopy, and the Mini Ventura's on-board NiMH pack is easy to reach and recharge. The DC Field Charger plugs into any convenient 12V outlet for a quick, complete charge.

Great change-of-pace choices for pilots!**DURATRAX™ EVADER™
ST****Ready-to-Run EP 2WD**

Winning in 1/10 scale stadium racing takes being a cut above the rest — and that's just how the 2WD Evader ST RTR was designed. It outshines the competition in completeness, convenience, set-up ease and performance potential, for now and later. Complete? All that's required is a 6-7 cell NiCd and charger; everything else is in the box, and ready to go. The chassis is factory-built, even to filled oil shocks and mounted tires with foam inserts. The body is painted and trimmed. Plus, the list of performance extras is longer than you'll find on some hopped-up stadium trucks. It includes full bearings, an adjustable slipper clutch, ball diff and suspension, steel universals as well as a modified, 20-turn Photon Speed™ motor, Sprint™ reversible ESC and a 2-channel DuraTrax radio made by Futaba®. Batteries for the radio are included and so is a FREE video on how to get started. In short, it's a stadium truck a driver can start with today and win with tomorrow!

Dive into offshore action immediately with the Reef Racer 2! It comes out of the box with decals already in place and the radio gear, motor and ESC installed. Twin, twist-off hatches on the enclosed hull and a hook & loop-attached hatch keep them protected against taking water, but release easily for pack changes and maintenance. Drop in a pack, bury the throttle and the Reef Racer leaps into action! You'll enjoy the quick response of the direct drive and the Reef Racer 2's "turn on a dime" maneuverability — even at top speed. If you happen to flip or roll — don't worry! The self-righting hull gets you hatch-side up and back into the action in seconds. The included Aquacraft 2-channel radio adapts for left-hand use with just a Phillips screwdriver and a few minutes. Available in six sizzling colors — and all of them ready to make waves on the water!

and ready to run!****HCAB14******Hull Length:** 15 in • **Beam:** 6 in**Includes:** 2-channel Aquacraft radio w/1 servo, 380 motor, ESC, 6-cell 1100mAh NiMH pack, DC 30-minute field charger**Requires:** 8 "AA" batteries**AQUACRAFT™ Models SEA SCOUT™****Micro R/C Sub RTR**

The Sea Scout not only takes R/C undersea — it makes R/C so simple that even an 8-year-old can serve as the Skipper. The left stick on the 3-channel radio controls the motor that provides forward and reverse thrust. The right stick controls the motor that steers the Sea Scout left or right. Buttons on either side control the motor that can send the Sea Scout straight down in a dive or straight up to the surface! A built-in NiMH battery powers long cruises and working lights and recharges in just minutes on the included DC charger. It's great fun with one — but available on 27MHz (Black) and 49MHz (Gray) so two Sea Scouts can dive and explore at the same time!
